Maximizing the benefits of Aquacoat® ECD

At DuPont, we aim to help our pharma customers with both every day challenges and future solutions. Armed with essential excipients and vital expertise, our broad portfolio is designed to deliver performance and cost advantages in various oral solid dosage forms.

Aquacoat® ECD is an aqueous colloidal dispersion of ethyl cellulose polymer. It is a hydrophobic material that can be used in moisture barrier and taste masking applications, and it has been used as a coating material for oral sustained release dosage forms since 1985. An aqueous dispersion of ethyl cellulose offers various processing advantages over organic ethyl cellulose solution, including reduced coating processing times, fewer environmental concerns, and the avoidance of potential toxicity related to residual solvent. In sustained release applications, Aquacoat® ECD offers a stable, reproducible, pH-independent release profile with similar dissolution profiles in the presence of fed and fasted gastric and intestinal media. Its primary release mechanism is drug diffusion across a water-insoluble membrane.

Presentation

In appearance, Aquacoat® ECD is a white to off-white liquid. Due to its nature as a pseudolatex system, the contents of Aquacoat® ECD may settle somewhat during transport or storage such that mixing of the product before testing and use is essential. When adequately mixed, Aquacoat® ECD presents a smooth, uniform consistency.

Packaging and storage

Aquacoat® ECD is available for commercial use in 15KG and 50KG drum formats. Samples of Aquacoat® ECD can be obtained upon request.

Aquacoat® ECD is a temperature-sensitive material. It should not be exposed to freezing or near-freezing temperatures or at temperatures above 35°C. DuPont recommends storing Aquacoat® ECD at temperatures of around 20°C (scientific room temperature).

Aquacoat® ECD Benefits

VERSATILE
Easily adapts to use in controlled release, moisture barrier and taste masking applications

FLEXIBLE
Select the plasticizer that best fits your drug release profile target

STABLE
Batch-to-batch consistency and proven shelf life of 24 months

GLOBAL FORMULATION SUPPORT
Dedicated DuPont resources to develop your formulations and provide expert project-specific guidance in North America, Europe, India and Asia
